

*1 vectors

- three ideas of a vector

physics

- arrow pointing in space w/ length & direction

math

- generalize two
- vector can be anything, as long as:

$$\vec{v} + \vec{w}$$

$$2\vec{v}$$

$$\begin{bmatrix} 1 \\ 2 \end{bmatrix}$$

CS

- ordered lists of numbers
- vector

- vector = arrow in a coordinate system w/ tail sitting at the origin
